

Install and setup check

What a clean install looks like, where the profile ends up, and why three keys look "missing" if the profile did not land.

1 Install from the Marketplace

1. Download from the Marketplace, then double-click `com.allemanit.rangefinder.streamDeckPlugin` (or click **Open in Stream Deck**). Stream Deck opens with an install prompt.
2. Click **Install**. The 15 plugin actions appear on the right under **Range Finder Companion**.
3. A second prompt follows: "contains preconfigured profile(s). Install the profile to your devices?" Click **Install Profile(s)**. This is the step that delivers the 15-key profile. If it was cancelled or never appeared, see section 4.

2 Restart Stream Deck after the install

This is the most likely fix for actions that do nothing right after install. Fully quit Stream Deck from the Windows system tray (right-click the icon, Quit), then launch it again. On my own fresh install the plugin keys only started firing input after that restart.

The Stream Deck **MCP server** option is not needed. Enabling it forces Stream Deck to restart, which is almost certainly what made things start working on your side. Leaving it on does no harm, but nothing in this plugin depends on it.

3 Calibrate once, then capture

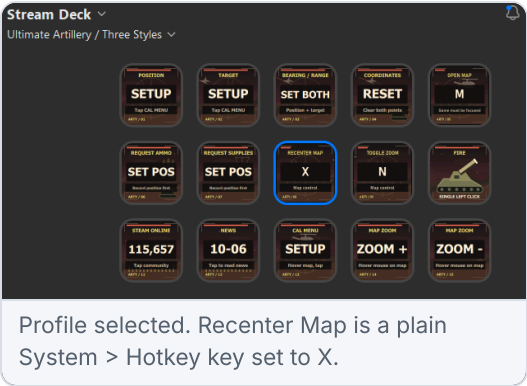

1. Open the game map with **M**, keep the game focused.
2. Hover a clear map point (away from screen edges) and press **CAL MENU**. The right-click menu opens.
3. Move the pointer over **Mark Coordinates** without clicking it, then press **CAL MENU** again within 60 seconds. **READY** means the offset is saved. Calibration is shared by all three pages and survives restarts; redo it after a resolution or UI-scale change.
4. Hover your firing position, tap **Position**. Hover the target, tap **Target**. The Bearing / Range key shows both. Recapture Position after you move.

The profile and the three "missing" keys

4 Find or import the profile

The profile installs **without switching your deck to it**, so it is easy to miss. Open the profile dropdown at the top of the Stream Deck window and pick **Ultimate Artillery / Three Styles**. Pages 1, 2 and 3 are War Machine, Field Manual and Classic Orange and Blue.

If it is not in the list, one of two things happened: the profile prompt was cancelled, or the device is not a 15-key Stream Deck (the bundled profile is built for the 15-key layout and only auto-installs on that model). Either way, import the attached `Ultimate-Artillery-Three-Styles.streamDeckProfile`: double-click the file, or go to **Preferences > Profiles > (gear) > Import**.

5 Open Map, Recenter Map, Toggle Zoom

These three are **not plugin actions**, which is why they are not in the Range Finder Companion list. They are native Stream Deck **System > Hotkey** keys that live in the profile and send the game's own keybinds. Without the profile they do not exist. Rebuilding them by hand takes a minute:

KEY	LABEL	STREAM DECK ACTION	HOTKEY	NOTES
	Open Map	System > Hotkey	M	Game must be focused
	Recenter Map	System > Hotkey	X	Map control
	Toggle Zoom	System > Hotkey	N	Map control

If you rebound M, X or N in WARDOGS, set the hotkey to whatever you use. The key art above is included in the attached profile; the PNGs can also be sent separately.

6 Still stuck? Send me these

- Stream Deck model and software version (Settings > About).
- A screenshot of the profile dropdown and of the Range Finder Companion action list.
- Which key you pressed and what happened on screen.
- Game resolution and Windows display scaling.

Reply to this email or write to duallema@quickitprojects.com. Happy to jump on a quick call or send replacement files if the attachments do not import.
